Form Post

```
<form action="post" action="<<URL>>">  
  <div>  
    <label>Field 1</label>  
    <input name="field1"/>  
  </div><div>  
    <label>Field 1</label>  
    <input name="field1"/>  
  </div>  
</form>
```

Controller Layer

```
{  
  field1:"value1",  
  field2:"value2",  
  ...  
}
```

AJAX Request

```
var xhr = new XMLHttpRequest();  
xhr.open("post", "<<URL>>");  
xhr.addEventListener("readystatechange", function() {  
    ...  
});  
xhr.send({field1: "value1", field2: "value2"});
```

Controller Layer

```
{  
  field1:"value1",  
  field2:"value2",  
  ...  
}
```

Controller Layer

```
{  
  field1:"value1",  
  field2:"value2",  
  ...  
}
```

Controller Layer

Summary

- HTML Forms
- AJAX Requests
